

# ENDURA DUAL

*For Operations*

*With No Time for Down Time!*

TESTIMONIAL: AUTOMOBILE SHREDDER AR500 = 85,000 MT

**ENDURA DUAL = 240,000 MT AND STILL IN SERVICE!!!!**

We decided to use a 1 ¾" **ENDURA DUAL** plate on our infeed chute leading to a 4,000 horse power shredder. The cost was more expensive than standard AR but we took the chance. We installed the plate three years ago and it has been nothing short of a complete success. For years we battled with wear plates over AR to protect the integrity of the infeed chute, which would still cause warping and pits in the chute. Since installing the **ENDURA** plate we have had no warping, no peel up on the lip, and no signs of any wear whatsoever. We have passed over 240 thousand tons of scrap through that chute and it's in the same condition as when it was installed.
